The top complaint waits 37 hours for a first answer

18.3%

of complaints are unrecognized charges

37 h

median first response

24.5%

closed or resolved

20.4%

breach the SLA

Fraud is contained in minutes, not days. One focused workflow: dispute intake. Source: 686,296 contacts from 148,443 customers.

The model talks. Policy as code acts

Normal

Server pins the charge. Nothing runs until the customer approves on screen.

Ambiguous or unsupported

Asks which charge. Policy answers only with a cited source. Abstains on credit.

Needs a human

19-field handoff package. AI copilot drafts, the expert edits and sends.

A tested data pipeline and three models, each against a baseline

- 56 dbt tests
- Manifest
- Update fixture

In the workflow: retrieval cites the policy rule or says it does not know. 0 false citations on 15 uncovered questions. **Negative result reported:** the SLA model has no signal, so it always abstains.

On a fresh held-out set, the agent beats the rules baseline

89%

of 129 runs pass every check.
43 new cases, frozen before building

82%

safe automated resolution on resolvable cases. Rules: 62%

0 / 18

missed handoffs to a human

1 / 129

real unsafe outcome (echoed typed card digits). 3 more flags: fixture artifact

Rules tie on the core flow. The agent wins where rules cannot go. On an older set and version, rules led 91 to 80, with 0 of 96 unsafe.

- Expired session
- Prompt injection
- Missing data
- Unauthorized access
- Tool outage
- Mixed languages

Live today, and clear about what is missing

IN PLACE

End to end on Google Cloud

81 browser tests pass in production

Tracing without message content

Explanations from sources, rules and records

Bounded retries, safe fallback

Handoff works without the model

Least privilege and secrets

30-day retention, alerts, Terraform

BEFORE REAL OPERATION

All results are offline

Synthetic data, simulated customer

Portuguese not native-reviewed

No Brazilian accounts in the data

One instance, no load test

Sessions still in memory
